

Communications Technologies

APPROACH

Ruberto, Israel & Weiner's Technology Business Group encompasses communications products and services and networking technologies. The emergence of sophisticated computer networks and wireless communications means that companies developing these technologies are continually tasked with delivering superior capabilities and improving how people communicate. We help these companies manage the legal challenges that arise with a growing business and expanding product line. Our attorneys provide strategic counsel and assistance with executing transactions in the areas of raising capital, public offerings, mergers and acquisitions, securities, regulatory compliance, employment, and corporate matters.

We have expertise representing both wired and wireless communications companies, including voice, data, cable, broadband, video, Internet, IP telephony, satellite radio, and TV, and local and wide area computer network equipment and services. Our list of industry clients includes U.S. and international companies, startups, established providers, and publicly-traded companies.

CONTACT
